

Why use *Copper?*

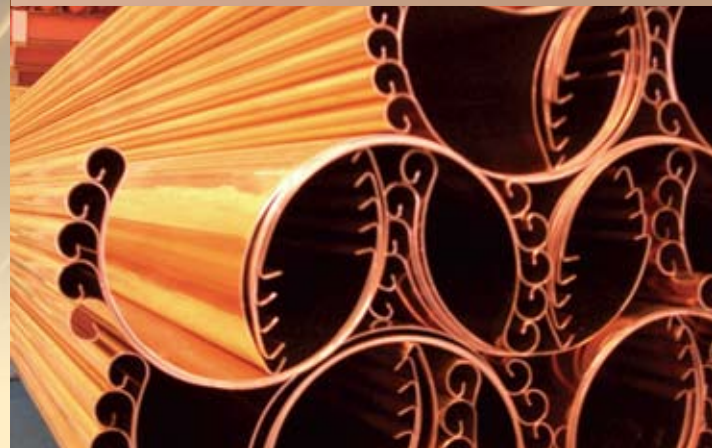

Since the earliest days of civilization, man has recognized copper's value for various architectural enhancements. Its beauty is immediately apparent while its endurance and durability provide decades of service.

Of copper's many applications, one of the most engaging is its use on beautiful homes across the world as copper gutters. Throughout Europe, copper gutter systems have long given homes a unique sense of style and elegance while also improving drainage functionality. Adding to their allure, copper gutters are environmentally friendly and 100% recyclable. In fact, copper is more versatile than glass, plastic, and aluminum, ensuring that it rarely ever finds its way to a landfill. Now, Green Metal USA is bringing this eco-friendly touch of European flare to homes in the United States.
